

Acceptable Trees to Plant on Distribution or Transmission Right-of-Way

Vegetation that might exceed 15 ft. should not be planted on right-of-ways.

- Choose off-right-of-way plants that will not grow so tall that they could fall into the power line within the right-of-way.
- Trees planted off the right-of-way that grow onto the right-of-way will be pruned to the extent that their limbs are no longer on the right-of-way.
- To reduce future SCE&G pruning, consider selecting trees with small crowns and mature heights less than 25 feet when planting next to the right-of-way.

Below is a list of plants that generally will not grow taller than 15 ft. at their maturity. If plants on this list exceed 15 ft. or these plants are placed on elevated planters, SCE&G is subject to remove them. Please note that this list is in no way inclusive; many additional plants are available.
